Web Developer

Having recently graduated from the Eleven Fifty Academy 2018 JavaScript 12-week program, I am very anxious to begin my new career in Web Development. I have learned so much in this time period and truly enjoy putting it to use developing applications that can benefit the business that I work for. I am equally comfortable programming both front and back end web modules. I also really like being on teams working towards a common goal. I was an IT Infrastructure manager and a Project Manager in my past career and am looking forward to starting down a new path that is both challenging and rewarding.

Technical Skills

- HTML5
- CSS3
- JavaScript
- React
- jQuery

- Angular JS
- Material
- TypeScript
- Node.JS
- Git/GitHub

- NPM
- Bootstrap
- PostgreSQL
- Postman
- MS Office

Projects

HelpMinder App - https://tbf-helpminder-client.herokuapp.com/

A full-stack React Web project designed to allow entry and tracking of long term events that you must remember such as house maintenance, taxes, Health appointments, car maintenance, etc. Ideally, any long-term events scheduled months into the future. This app phase 1 features full (CRUD – record creation, reads, updates and deletes) and was completed on time as required and deployed on Heroku.

Portfolio App - https://thomas-flynn.github.io/JS-Proj-Portfolio/

This app includes JQuery, Bootstrap, Gulp, WowJS and a parallax view. It shows work I had done within the first month of the cohort, with functional links to every project or task shown as well as within the portfolio itself. I am updating it to include projects and work that I have completed since the portfolio was completed and I will republish the portfolio at that time.

The Bicycle Garage - https://thomas-flynn.github.io/JS-Proj-StoreApp/

A single page store front app utilizing HTML and CSS completed after one week in the cohort.

Cake Donuts

This Angular app was originally written as a means to install the basic Angular "Tour of Heroes" app with the premise changed for some interest. The purpose was to create our first Angular app and exercise "mock" data reads and item selections within the app.

Experience

FULLBEAUTY BRANDS, Indianapolis, Indiana
Vice-President IT Technical Services and Operations, March 2002 – May 2017
Management of IT Technical Services and Operations teams in the procurement, installation, maintenance and operation of infrastructure necessary for providing an environment for the business units to excel in their areas. Responsible as well for recruiting, developing and managing of the technical teams comprising Operations, Network, Client/Server, Database and Systems Architects that in addition to their normal operational duties, served with me on the many infrastructural projects described below. I had responsibility of IT budgeting and cost control working very closely with Finance to keep IT spend at or below 2% of annual sales.

Ticketing and Problem/Change Systems Conversion *(Jul 2016 – May 2017)*
Replaced various single purpose ticketing and problem/change management executing on multiple platforms and having no uniformity with Jira/Confluence software providing improved and consistent desktop/smartphone ticketing, problem/change management, and IT data archival.

El Paso Call Center Telemarketing Systems Conversion *(Aug 2014 – Dec 2015)*
Creation of a robust web-based mid-tier development, testing and production server-based system utilizing existing El Paso VMware and Wyse Thin Clients for processing customer orders and customer service for all FBB Brands.

New York IT Infrastructure Move to 1 NY Plaza *(Jul 2013 – Jul 2014)*
Assigned as IT Infrastructure PM working with a team of 10 Client/Server and Network associates in relocating IT operations and user environment from Times Square to South Manhattan. All of FULLBEAUTY Brands was moving to new location and I had responsibility for IT Infrastructure servers, network, software, desktops and printers. Also, established Wi-Fi throughout new office areas at 1 NY Plaza.

Lotus Notes Conversion to MS Outlook Web Access *(May 2011 – Feb 2012)*
Conversion of old Lotus Notes environment to current MS cloud based OWA system that would support newer iPhone and Android technology as well as provide a basis for MS Office365 environment migration.

PCI/DSS Compliance *(Apr 2006 – Nov 2007)*
Responsible for overall coordination, senior management involvement, funding and support, departmental cooperation and liaison with internal audit team and PCI/DSS QSA.

Thomas B. Flynn

tflynn049@outlook.com   (317) 289-7294

Director, Computer Operations and Technical Support, February 1998 – March 2002
Responsibility for IT Operations, IT Network, IT Client/Server and IT Budgeting in addition to the IT Technical Support (mainframe) group.

Convert Mainframe Financials Systems to Oracle EBS *(2001 – 2003)*
Led IT Technical Services teams in working with IT Applications and Systems Integration Partner resources in conversion of mainframe-based McCormick & Dodge financials system to Oracle EBS R11i (Enterprise Business System) executing on a mid-tier server complex.
